Sponsor need and iteration goal

SPONSOR NEED

Help clients show where they hurt using familiar body areas and a visual map, while preserving the consultation form.

ITERATION 1 GOAL

Build a reliable, testable body map. Let clients select an area and see the 3D model focus there. Investigate submission and deployment blockers.

Iteration 1 planned work

Body map data	#42–#45
Client interaction	#46–#51
Integration and acceptance	#52–#53
Submission and deployment	#5, #40, #61
Engineering quality	CI, architecture and tests

Scope change: Arm and Leg brought the supported areas from ten to twelve.

Speaker: Girwan Dhakal

Completed on main

Viewer module

PR #55

12 stable body areas

PR #57

Readable muscle catalog

PR #58

Muscle-to-area mapping

PRs #59–#60

Area controls

PR #56

Highlighting and camera focus

PR #60

Selection and reset state

PR #64

Unit and browser CI

PR #64

Speaker: Girwan Dhakal

Visual selection workflow

Feature branch • PRs #65–#66

2. Interactive Body Map

Choose a familiar body area first. You can then optionally point to the exact spot on the model.

Choose a body area

<u>Neck</u>	Shoulder	Upper Back	Lower Back	Arm	Elbow	Wrist/Hand	Hip
Leg	Knee	Ankle	Foot				

Selected area: Neck

Change Area	Clear Selection
-------------	-----------------

Show us where it hurts in your Neck

Speaker: Lily Oswald

Exact spot selection

Feature branch

Neck

Rotate or zoom to explore this area.

Focused region

Spot selected

Left spot selected.

Selected spot

Form Submission Error

Bug-fix

An error occurred while submitting the form. Please try again.

✖ ▼ Form submission error: ▼ t ⓘ
status: 404
text: "Account not found"
▶ [[Prototype]]: Object

Before fix

Speaker: Griffen Bon

Thank You, Goode People!

Your intake has been received

After fix

Explanation of Change

01 **Discovered Out-of-date EmailJS credentials**

Public_Key in site didn't match Public_Key in account

02 **Replaced credentials with test credentials in repo**

Created new EmailJS account for testing functionality

03 **Noted correct EmailJS credentials**

Troubleshoot with sponsor to find correct credentials

04 **In the future, deploy code with correct credentials**

The next deployment will fix this bug

Speaker: Griffen Bon

Incomplete and blocked work

INTEGRATION

#51

Muscle data is not saved to form fields.

#52–#53

Email details and mobile/accessibility acceptance remain.

EXTERNAL DEPENDENCIES

#40 / #61

Deployment process needs resolution.

#15

Deployment investigation has no final recommendation.

Browser CI does not submit a real email.

Speaker: Girwan Dhakal

Team contributions

Jay Roy	Backlog; architecture, state and browser tests. Visual workflow.
Lily Oswald	Area controls, mapping and Arm/Leg expansion, spatial focus, peer reviews.
Girwan Dhakal	CI, viewer cleanup, area data, muscle catalog and side handling. Reviewed PRs.
Griffen Bon	EmailJS investigation, sponsor troubleshooting, deployment and credential work.

Speaker: All

Engineering and quality evidence

29 / 29

Node tests passing

HTMLHint: 3 files, 0 errors

Playwright browser workflow:
passing

CI runs on pushes and pull
requests

BROWSER COVERAGE

All twelve areas and keyboard controls

Responsive widths and camera focus

Material restoration and model load
failures

Accepted and canceled reset

Speaker: Lily Oswald

Design decisions

Familiar areas

Expanded to twelve regions, including Arm and Leg.

Visual interaction

Use the 3D map instead of asking for anatomical terms. Exact spot remains optional.

Stable architecture

Separate model catalog, area mappings, focus rules and selection state.

Reproducible testing

Version model data locally and run browser tests in CI.

Speaker: Lily Oswald

AI use and verification

01

AI TASKS

Project setup and labels;
initial codebase review.

02

CODE REVIEW

Team members
reviewed AI-generated
changes and read code
submitted in PRs.

03

TEST RESULTS

29/29 Node tests
HTMLHint checks
Passing Playwright CI

DISCLOSURE Material AI use was recorded in individual stand-ups.

Speaker: Girwan Dhakal

Review and retrospective

KEEP

Small issues and PRs
Peer review
Automated CI

FIX

Deployment details
stayed unresolved
